A scatter plot showing the relationship between liver expression (y-axis) and islet expression (x-axis) for 100 genes. The x-axis ranges from -1.5 to 1.5, and the y-axis ranges from -3 to 3. The data points are represented by open circles. The plot shows a positive correlation, with most points clustered between -0.5 and 1.0 on the x-axis and -1 and 2 on the y-axis. There is a notable outlier at approximately (-1.5, -3.0).
